Biomedical commercialization course

Are you thinking about a career in:

Healthcare product development or commercialization in an established or an early-stage company?

In-house business development or healthcare consulting, investment banking or venture capital?

This course might broaden your career prospects (or at least not waste too much of your time). It is an interdisciplinary course (ES 720) developed at Johns Hopkins and taught on six Mondays, 6:30-9:30pm, starting in January.

Registration is open to MBA students and, with instructor permission to graduate students in medicine, bioengineering, pharmacy, life sciences, law, public health, and health management. The interplay and networking among students is a major benefit of the course.
