Humanities Collaboratory Workshop: Making Projects Accessible

Overview

In this workshop, Dr. Stephanie Rosen (U-M Library Accessibility Specialist) and Heidi Steiner Burkhardt (U-M Library User Experience Specialist) will introduce the concepts of accessibility and usability to help teams think critically about the goals of their projects, as well as design deliverables that will be usable for a broad range of audiences using a range of technologies.

In this session, teams will also have the opportunity to work through questions connected with their anticipated project outcomes.

Agenda

- Introductions
- Usability
  - User Experience
- Accessibility
  - Definitions
  - Why Accessibility
  - Understanding Accessibility
- Question Break
- Content strategy
  - Audience
  - Goals and outcomes
  - Scope and maintenance
  - Environmental scan
  - Metrics and follow-ups
- Accessibility Challenges
  - Multimedia and visual media
  - Interactive elements
  - Translation and multiple languages
  - Outside vendors and solutions
- Discussion Questions for your project

Humanities Collaboratory Workshop: Making Projects Accessible

Questions for group discussions

- **Audience**: Who are the primary and secondary audiences for your project?

- **Goals and outcomes**: What user need(s) are you trying to solve with your project (goals)? What are some possible outcomes of the project?

- **Scope and maintenance**: Does your project’s content fit into a broader picture (program, service, ecosystem)? What have you considered around maintenance and lifespan of your project?

- **Environmental scan**: What are your project’s potential blockers (if any) and what other people will be involved in making it a success?

- **Metrics and follow-ups**: How do you plan to let people know your project exists and how will you measure success?

- **Multimedia and visual media**: How will multimedia be translated across sensory modes? How might you include the creation of accessible materials in project workflows?

- **Interactive elements**: Will complex interactive elements function with keyboard only, on mobile device, with assistive technology? If not, what will you do to provide access?

- **Translation and multiple languages**: What content will be translated and how will translations be presented?

- **Outside vendors and custom solutions**: How might you ensure that the product will meet accessibility guidelines?
