

Monarch Butterflies

By: Te'nyiah Ward

There is a monarch butterfly pharmacy where Dr.s Hunter and Dr. Derode works. Dr. Hunter went and graduated at the college University of Michagan.

Dr. Derode went to Emroy University.
(On the left is Dr. Deroode. On the right is Dr.Hunter.)

Paragraph 2

- Monarchs get the flu like symptoms die, because they are too weak and don't develop.
- Weak larvae are eaten by paper wasps, if caterpillars survive to chrysalis the monarchs.
- Often are too weak to open their wings. The "flu" is caused by parasites.

Paragraph 3

- Mother's that end up with the parasite choose to lay their eggs on only tropical milkweed Hunter and Devooode now discovered.
- That plant has a poisonous chemical (cardinals) that kills parasites (protozoans).
- By making the parasites cell leak plasma.

"The cool thing is monarchs have evolved so the poison does not hurt them. But kills the parasite. And seem the monarchs seem to know how to use it."
