Hypo-Deductive Model of the Scientific Method

The Problem

The combination of a strong bias toward statistically significant findings and flexibility in data analysis results can lead to irreproducible research

The Problem

The combination of a **strong bias toward statistically significant findings** and flexibility in data analysis results can lead to irreproducible research

Fanelli D (2010) "Positive" Results Increase Down the Hierarchy of the Sciences. PLoS ONE 5(4): e10068. doi:10.1371/journal.pone.0010068
<http://127.0.0.1:8081/plosone/article?id=info:doi/10.1371/journal.pone.0010068>

The Problem

The combination of a strong bias toward statistically significant findings and **flexibility in data analysis** results can lead to irreproducible research

The Garden of Forking Paths

Control for time?

Exclude outliers?

Median or mean?

Hypothesis: “Does X affect Y?”

The Problem

The combination of a strong bias toward statistically significant findings and flexibility in data analysis results can lead to **irreproducible research**

Reproducibility Project: Psychology

What is Preregistration?

What is Preregistration?

A time-stamped, read-only version of your research plan created *before* you begin data collection.

What is Preregistration?

A time-stamped, read-only version of your research plan created *before* you begin data collection.

It contains:

- Hypothesis
- Data collection procedures
- Manipulated and measured variables
- Statistical model
- Inference criteria

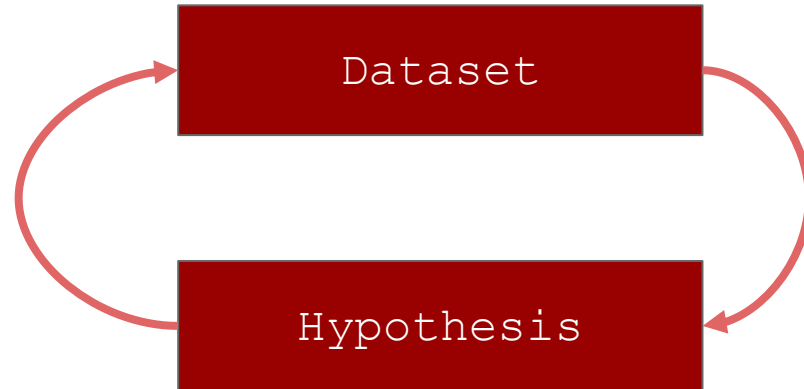

When the research plan undergoes **peer review before results are known**, the preregistration becomes part of a Registered Report

What problems does preregistration fix?

1. The file drawer effect
2. **P-Hacking**: Unreported flexibility in data analysis
3. **HARKing**: Hypothesizing After Results are Known

What problems does preregistration fix?

Preregistration makes the distinction between **confirmatory** (hypothesis testing) and **exploratory** (hypothesis generating) research more clear.

Confirmatory vs. Exploratory Analysis

Context of confirmation

- Traditional hypothesis testing
- Results held to the highest standards of rigor
- Goal is to minimize false positives

P-values interpretable

Context of discovery

- Pushes knowledge into new areas/ data-led discovery
- Finds unexpected relationships
- Goal is to minimize false negatives

P-values meaningless

Confirmatory vs. Exploratory Analysis

Context of confirmation

Context of discovery

Presenting exploratory results as confirmatory increases the publishability of results **at the expense of credibility of results.**

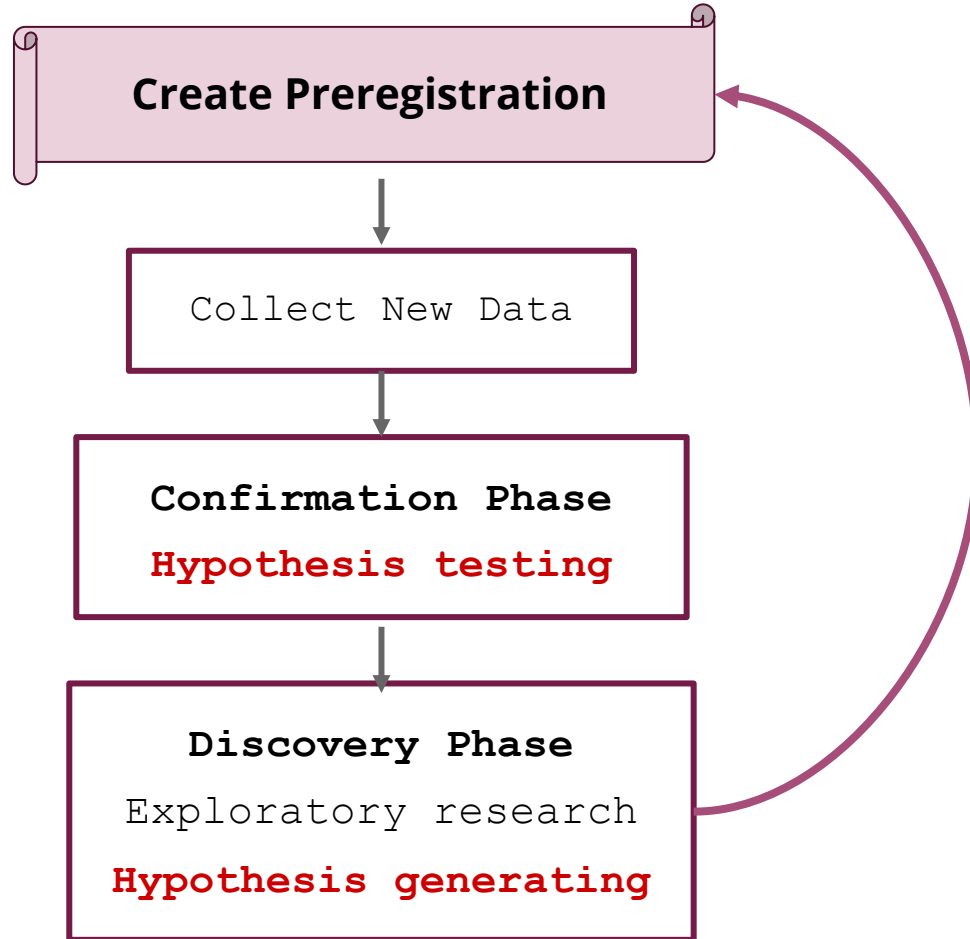

P-values interpretable

P-values meaningless

Example workflow

Theory driven, a-priori expectations

Prereg Templates

Registration Forms and Templates

Registration Forms	Description	Templates
OSF Prereg* (citable from this preprint)	This is our standard, comprehensive, and general purpose preregistration form.	Google Doc , OSF Workflow , R Markdown by Frederik Aust , R Markdown by James Bartlett
Open-Ended Registration	Summary of registered work with a time-stamped snapshot of a research project. Use this one if you are registering a completed project with data or materials.	Word , GoogleDoc
Qualitative Preregistration* (Haven et al 2020)	Template for registering primarily qualitative work.	Word , GoogleDoc , FAQ
AsPredicted Preregistration* form here	Eight questions derived from content recommended by AsPredicted.org .	Word , GoogleDoc
OSF-Standard Pre-Data Collection Registration	State whether data have been collected or viewed and other pertinent comments. Use this one if your pre-analysis plan is uploaded on OSF as a doc	Word , GoogleDoc
Replication Recipe (Brandt et al., 2013): Pre-Registration*	Register a replication study with a series of questions regarding the original work.	Word , GoogleDoc
Replication Recipe (Brandt et al., 2013): Post-Completion	Register a replication study after it has been conducted with questions regarding the outcomes of the replication.	Word , GoogleDoc
Pre-Registration in Social Psychology (van 't Veer & Giner-Sorolla, 2016)*	Preregister a research study outlining the hypotheses, methods, and analysis plan	Word , GoogleDoc , OSF
Registered Report Protocol Preregistration	Register your protocol AFTER having been given "in-principle acceptance" from a Registered Report journal	Word , GoogleDoc , OSF Workflow
Secondary Data Preregistration*	For preregistering a research project that uses an existing dataset.	OSF Page , Example , FAQ

Prereg Templates

These forms are not available as guided workflows on the OSF, but rather as template docs that you can fill out and register using the "Open-Ended Registration" form. We are always evaluating our guided workflows and will likely include one or more of these in the future.

Registration Forms	Description	Templates
OLD "Qualitative Research Preregistration"	This is an earlier version of the form that is now included on OSF	OSF page
Cognitive Modeling (Model Application)*	Use when you wish to apply a cognitive model as a measurement tool to test hypotheses about parameters of the cognitive model	OSF Page and Preprint
fMRI Preregistration Template*	This project provides a detailed preregistration template for fMRI studies and provides some guidance for common difficulties that can occur for fMRI preregistration projects.	OSF page
Open Stats Lab and Project Tier*	This preregistration template is geared towards researchers who have little experience with preregistering studies	OSF Page

Evidence Prereg Increases Rigor?

- Metascience 2021

Part 2 -Study Elements

Olimo van den Akker

Essential elements
Independent variable
Dependent variable
Data collection procedure
Statistical model
Inference criteria

Non-essential elements
Third variable
Control variable
Inclusion / exclusion criteria
Missing data
Statistical assumptions
Outliers

The diagram illustrates the scientific process as a continuous cycle. The stages are: Publish and/or conduct next experiment, Generate and specify hypothesis, Design study, Conduct study and collect data, Analyse data and test hypothesis, and Interpret results. Red arrows indicate the mapping of essential elements to these stages: Independent variable and Dependent variable map to Design study; Data collection procedure maps to Conduct study and collect data; Statistical model maps to Analyse data and test hypothesis; and Inference criteria maps to Interpret results.

Proportion of supported hypotheses

Olmo van den Akker

RESULTS

Standard reports: **96.05%** positive
Registered Reports: **43.66%** positive

- significantly different from zero
($\chi^2 = 77.96, p < .001$)
- not equivalent to $\pm 6\%$
($z = 7.61, p > .999$)

Fanelli (2010): 91.5%
Sterling (1959): 97.28%
RP:P (2015): 97%

Effect Size Correction

FIGURE 3 | Medians (with 95% bootstrap confidence intervals) of effects published without pre-registration (absolute values) for the nine Social Sciences Citation Index psychological sub-disciplines. The bars contain all effects that were extracted as or could be transformed into a correlation coefficient r . The vertical line is the grand median.

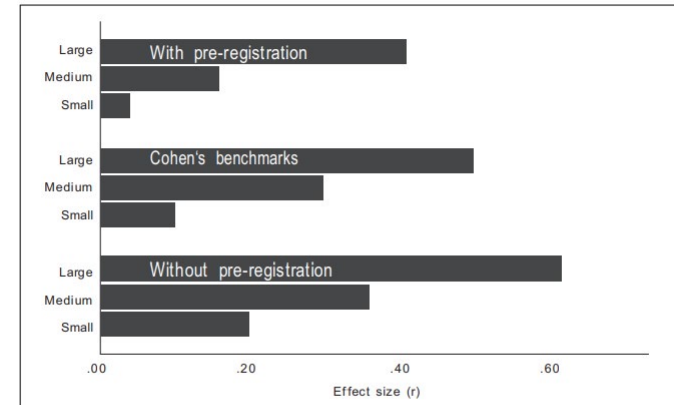

FIGURE 2 | Cohen's conventions for small, medium, and large effects compared with empirical effects (lower, grand, and upper median) from studies published with and without pre-registration.

Schäfer T and Schwarz MA (2019) The Meaningfulness of Effect Sizes in Psychological Research: Differences Between Sub-Disciplines and the Impact of Potential Biases. *Front. Psychol.* 10:813. doi: 10.3389/fpsyg.2019.00813

TABLE 2 | Median, mean, and SD of sample size, and percentage of significant effects for all studies where an effect size (r) was extracted or calculated.

Mdn_N = Median of sample size; *M_N* = Mean of sample size; *SD_N* = SD of sample size; % sig. = Percentage of significant effects ($p < 0.05$). Note that studies with pre-registration were too few to divide them into sub-disciplines.

FAQs

FAQs

Can't someone "scoop" my ideas?

FAQs

Can't someone "scoop" my ideas?

1. Date-stamped preregistrations make your claim verifiable.
2. By the time you've preregistered, you are ahead of any possible scooper.
3. Embargo your preregistration.

FAQs

Isn't it easy to cheat?

FAQs

Isn't it easy to cheat?

1. Making a “preregistration” after conducting the study.
2. Making multiple preregistrations and only citing the one that “worked.”

FAQs

Isn't it easy to cheat?

1. Making a “preregistration” after conducting the study.
2. Making multiple preregistrations and only citing the one that “worked.”

While fairly easy to do, this makes fraud **more intentional**.

Preregistration helps keep you honest to **yourself**.

Tips for writing up preregistered work

1. Include a link to your preregistration (e.g. <https://osf.io/f45xp>)
2. Report the results of **ALL** preregistered analyses
3. **ANY** unregistered analyses must be transparent

THANK YOU!
