

it does **not** matter which one is 1.18A and which one is 1.18B

it does **not** matter which one was 1.18A and which one was 1.18B but they should be carried through with consistency from the previous question

(a) and (b)

(c) the distributions are different; in the top case, there are two different possible sites for replacing an H with a Br, while in the second case there is only one

(a)

(b)

(c)

(d)

(a)

(b)

(c)

(d)

(a) Xanax

OK as is

(b) Intuniv
