New Course!
Evolution, Environment, and Global Health
Anthropology, Biological (ANTHRBIO 167)

Earth is on the brink of the Sixth extinction event and scientific evidence shows that humans are the cause. Anthropology is the discipline that seeks to understand human behavior both in the present and in the evolutionary past. It can uniquely contribute to understanding how we got here and what we need to do. This course will help students to think about ways that humans can intervene both locally and globally.

When: FALL 2017, TuTh 4:00 pm - 5:30 pm
Where: 1202 SEB
Credits: 4
Requirements & Distribution: BS, NS
Professor: Beverly I. Strassmann
