This January, we are excited to host our fourth Jane Street Symposium. We're inviting current and recent PhD students to spend two days learning about the rich set of problems we face as a quantitative trading firm and how we apply mathematical and computational techniques to solve them. The program will consist of lectures by Jane Street researchers, short talks by the symposium attendees, and an interactive workshop. Due to the COVID-19 pandemic, the program will be remote this year.

Applications will close on December 1st at 11:59pm ET.

If you have any questions, please don't hesitate to email symposium@janestreet.com.

About Jane Street

Jane Street is a research and technology-based quantitative trading firm with over 1000 employees and offices in New York, London, Hong Kong, and Amsterdam. We employ mathematicians and scientists from top
academic programs to create models that allow us to trade billions of dollars around the world every day.
