

ASH Lab: Research Technician (FT/40 hours per week)

[Application Link](#)

Application Deadline: December 10, 2022

Start Date: Spring/Summer 2023

Location: Philadelphia, PA

Salary: \$40,000 annually w/ Temple University benefits

The **ASH Lab Research Technician** will contribute to the lab's research goals, including identifying the underlying neural circuits coordinating food-related decision making. The ASH Lab uses a variety of cellular, molecular, behavioral, and open-source neuroscience approaches in rodent models with the ultimate goal of identifying the neural underpinnings of diseases associated with dysregulated feeding, including eating disorders and overconsumption. Experience with rodent handling is required, while additional experience in colony management, mouse behavior, immunohistochemistry, and/or molecular biology techniques is preferred but not required.

We highly encourage applicants with at least half of these skills to apply. Applicants from systemically marginalized populations are highly encouraged to apply. The ASH Lab is a teaching lab and professional development will be woven in with job responsibilities and professional interests. The ASH Lab is a collaborative and inclusive space centered on experiential learning for all team members, including Dr. Ames Sutton Hickey.
