What is a median?

The scores above reflect the median. In this case we took the median of a group of medians. If you sorted a series of evaluation scores in order from smallest to largest, and then looked at the number in the middle of the group, that would be the median. For example, in this group of numbers, four is the median.

2 3 3 3 4 5 5 5 5

In this example, the median would fall between two numbers. In that case, the median would be the two numbers combined and divided by two, which would be four.

2 3 3 3 3 5 5 5 5 5
