Question 2.08 asks you to draw the 3D orbital picture of the most significant resonance contributor for both structures. Select one of them and draw the 3D orbital picture for one of the less significant contributors. As you do this, please note the places where drawing the less significant contributor is identical to drawing the picture for the most significant one.

localized electron structure - same for both contributors
add in the empty orbitals - same for both contributors
assign electrons, bonds, & charges for the specific contributor

 localized electron structure - same for both contributors
add in the empty orbitals - same for both contributors
